

MY SLOT NOTES

RESULT = Robert E Sult
For the best reSULT conSULT SULT

OLD Poker Boards

OLD PCB BOARDS

&

PROCESSORS

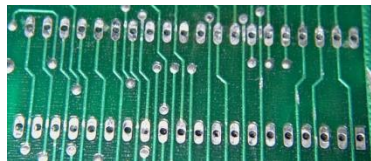

The old boards require this socket with the processor to work.

Without this socket - You will get NOTHING - no Video - No Game.

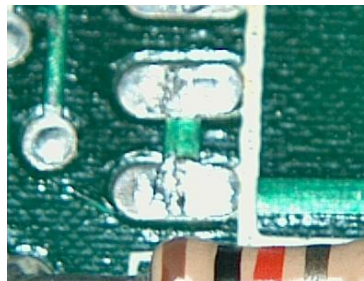

As a bench Tech, I have fixed the PCBs and put them on the shelf as good. To be used later.

I have been seeing many tags on them like this one.

So I have removed the 40 Pin socket.

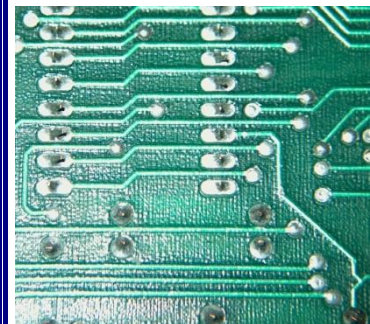

Need to Cut one trace under the Socket, Pin 19 and Pin 20.

And Place a jumper. On

The Older board.

You can see the difference.

After this mod. you can use the older PCB with the Processor without the special socket

I check them, and they work just fine.

Guess, not all techs know that the older boards need this special socket,

ASSY NO. 7570300
MADE IN U.S.A.

And over the years many have been lost and or broken.

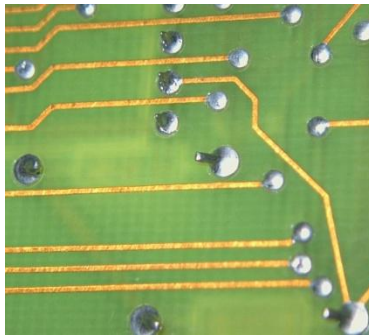

Pin 18 and pin 19.

The newer board.

ASSY NO 7570320
MADE IN U.S.A.

Had been changed.

And it works just Fine.
And Just maybe I will not see any more Tags like.
